

# Passwordless Authentication for Today's Enterprise

Eliminate password lists and minimize credential abuse with the next generation of workforce authentication, deployable across all types of IT environments Protect every login, on legacy or cloud-native applications, hassle free

## For Users

**A simple "touch-and-go" MFA to access all enterprise resources:** on-premise or in the cloud, online and offline, including their workstations, remote access VPN, single sign-on, and more. Supports a broad range of mobile and FIDO (Fast IDentity Online) compliant authenticators.

## For IT Admins

**A cost-effective authentication solution** supporting both modern and legacy infrastructure & applications, deployed on-premise or in the cloud, either immediately or gradually.

## How It Works

Instead of entering a password, users simply approve an authentication request securely delivered to their Authenticator app, or use their FIDO2-compliant authenticator. Users will never have to create, remember, restore, or change another password. Passwordless MFA sends cryptographically secure push notifications to the user's mobile device to ensure only the authorized user in possession of their known device can successfully authenticate. Layering biometric authentication to access the Authenticator results in passwordless multi-factor authentication that is easy to use and highly resistant to credential theft and man-in-the middle attacks. Following successful authentication, the Authentication Server generates a long, complex session password that is securely delivered to the relying system. A fresh password will be automatically generated for every session without user involvement.

## Your Benefits

-  **Reduce attack surface**  
80% of data breaches utilize compromised passwords.
-  **Improve workforce productivity**  
Up to 11 hours are spent every year on resetting passwords
-  **Reduce access management costs**  
25% to 40% of all IT help desk calls are attributed to password problems
-  **Free up security budget**  
reduce the costs of anti-phishing protection, as passwords can't be shared by users.
-  **Flexible migration**  
Deploy on all apps or on a selected subset. Secure even legacy, password-dependent systems
-  **Superb user experience**  
no passwords to key in and no hardware authenticators to fiddle with.

## About GlobalDots

GlobalDots is a 17-year world leader in cloud innovation, connecting businesses with the latest cloud & web technologies. Fusing an insatiable hunger for innovation with a diligent team of hands-on experts, we help our customers maintain an up-to-date technology position in a quickly-changing world. We consult, resell, implement, and customize full-stack solutions, including cost & performance optimization, security, connectivity, and managed services, to streamline business processes and provide the foundation for sustainable business growth.
